Linux Lite – Press Release

Date: 26th July, 2016

Hello,

Linux Lite has been producing up to date, well supported Linux Kernels since version 3.13 of the Linux Kernel. We invite people from across the Debian and Ubuntu based communities to freely access our Linux Kernels. We've noticed there are no other Debian and Ubuntu based distributions offering access to the latest Linux Kernels packaged in .deb format, but that there is a common demand for this.

What we offer:

- Free access to our Kernel repository.
- The latest mainline stable Kernel.
- Kernel packages offerings are: headers and image packages.
- Kernels are tested before release.
- A simple, 3 step installation method.
- **Same day release** of the latest Linux Kernel.
- Social media announcements on the following platforms: Facebook, Twitter and Google+
- 16 Linux Kernel versions to date.

Installation:

Releases come in the form of the mainline, major numbered releases ie. 4.4 ,4.5, 4.6, 4.7 and so on.

Repository page:

<http://repo.linuxliteos.com/linuxlite/pool/main/l/lite-kernel/>

Example installation, open a terminal:

```
wget http://repo.linuxliteos.com/linuxlite/pool/main/l/lite-kernel/linux-headers-linuxlite-4.7.0\_0010\_amd64.deb
```

```
wget http://repo.linuxliteos.com/linuxlite/pool/main/l/lite-kernel/linux-image-linuxlite-4.7.0\_0010\_amd64.deb
```

```
sudo dpkg -i linux-*.deb
```

Reboot.

Support:

Support via the following thread: <https://www.linuxliteos.com/forums/installing-software/linux-lite-kernel/> (over 33,000 views to date)

Thank you,

Jerry Bezencon
Linux Lite Project Leader
